

Join one of the following teams within Engineering:

- Data Ingestion
- Data Marketplace
- Pixel Serving

You will:

- Contribute deeply to our real production systems - billions of daily requests, 80+ PBs of data, millions of anonymous people records, and powerful web applications to make it all accessible and intuitive.
- Learn about the business and engineering practices at LiveRamp.
- Prove yourself and earn the responsibilities of a full-time engineer.

About you:

- Possess strong coding skills that you are ready to turn into industry-ready coding skills
- Background? Pursuing a degree in Computer Science or other STEM degrees
- Excited to learn new languages and technologies
- Willing to dive in and learn by doing
- Ready to work with others to solve hard problems
- Possess a startup personality: smart, ethical, friendly, hard-working and proactive
- Excited to work with products that have close interactions with customers

Bonus Points (varies by team, but here are a few):

- Knowledge of Java, Core Java, Big Data, such as Hadoop and Spark
- Knowledge of distributed SQL database management systems, such as SingleStore
- Experience with GCP or another cloud provider (AWS, Azure, ...)
- Experience with Kubernetes, Cadence, Scala
- Contributions to open-source projects
- Projects involving Workflow Orchestration
- Experience with Agile software development
- Experience developing user interfaces with the React framework
- Experience with Ruby on Rails or Node.js

- Experience with TypeScript and Express.js
